

logo: CocktailForYou

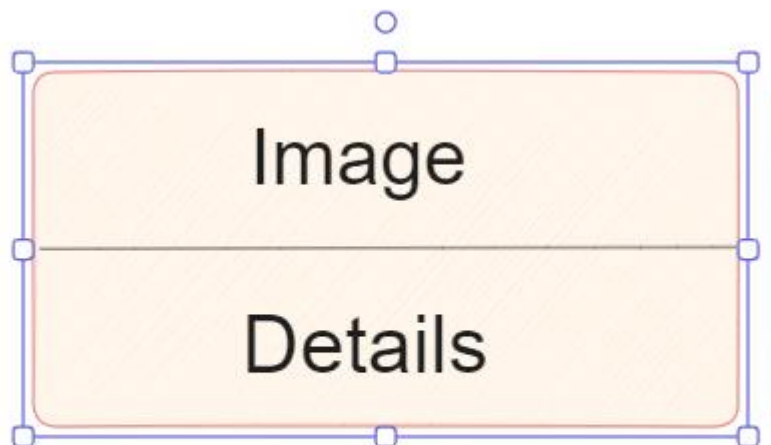

Home Page:

- Display the cocktail name with a simple static card on the home page.
Example:

Cocktail page (2nd page):

- When the user clicks on the home page static card then redirects to another page and displays the list of that cocktail.
- Use the below URL to fetch cocktails information.
- The card should contain details of the drink, alcoholic or non-alcoholic with an Image. Please find the below snapshot for more details.
- Please provide a filter option at the page level for alcoholic and non-alcoholic drinks.
URL : <https://www.thecocktaildb.com/api/json/v1/1/search.php?s=Margarita>

Ingredient page (3rd page)

- When the user clicks on the drink card (page 2 card) then it should give the ingredient details of the drink with image.

Example:

Please upload the completed assignment to GitHub and share the public URL that we can access. Please don't share code as zip or any other format.

Notes:
